

Bexar County and San Antonio offer valuable assets and numerous advantages ready to support the future technology development and manufacturing operations of leading commercial and military aerospace companies.

San Antonio is the very birthplace of military aviation and current location for both Randolph Air Force Base and Lackland Air Force Base. San Antonio remains “Military City, USA,” home to the skills, security assets, and character of the largest military retirement population in the country, as well as to leading contractors such as Boeing, Lockheed Martin, Pratt & Whitney, General Electric and Sino-Swearingen. Because Texas is a “right-to-work” state, Bexar County’s location affords companies labor flexibility in assuring that customer delivery targets are met.

University and institutional research assets include Trinity University, the University of Texas at San Antonio, St. Mary’s University, the Southwest Research Institute and a future Texas A&M University San Antonio campus. Additionally, just an hour’s drive to the north, the University of Texas at Austin produces sought after graduates in its aerospace, electrical and mechanical engineering degree programs.

Bexar County has the conditions and capacity to help aerospace companies satisfy the critical technology needs and missions of its specialized customers and we offer a long-term value proposition for future growth. Moreover, our distinguished community offers workers and their families a very high quality of life, recreation and medical care.
