

HIGH WATER ALERT LIFESAVING TECHNOLOGY

There are 52 HALT locations in Bexar County.

Drivers will be alerted to dangerous high water with either flashing lights or a combination of flashing lights and gates.

The Bexar County HALT system is a tool to warn drivers when there is too much water over the road to drive through safely.

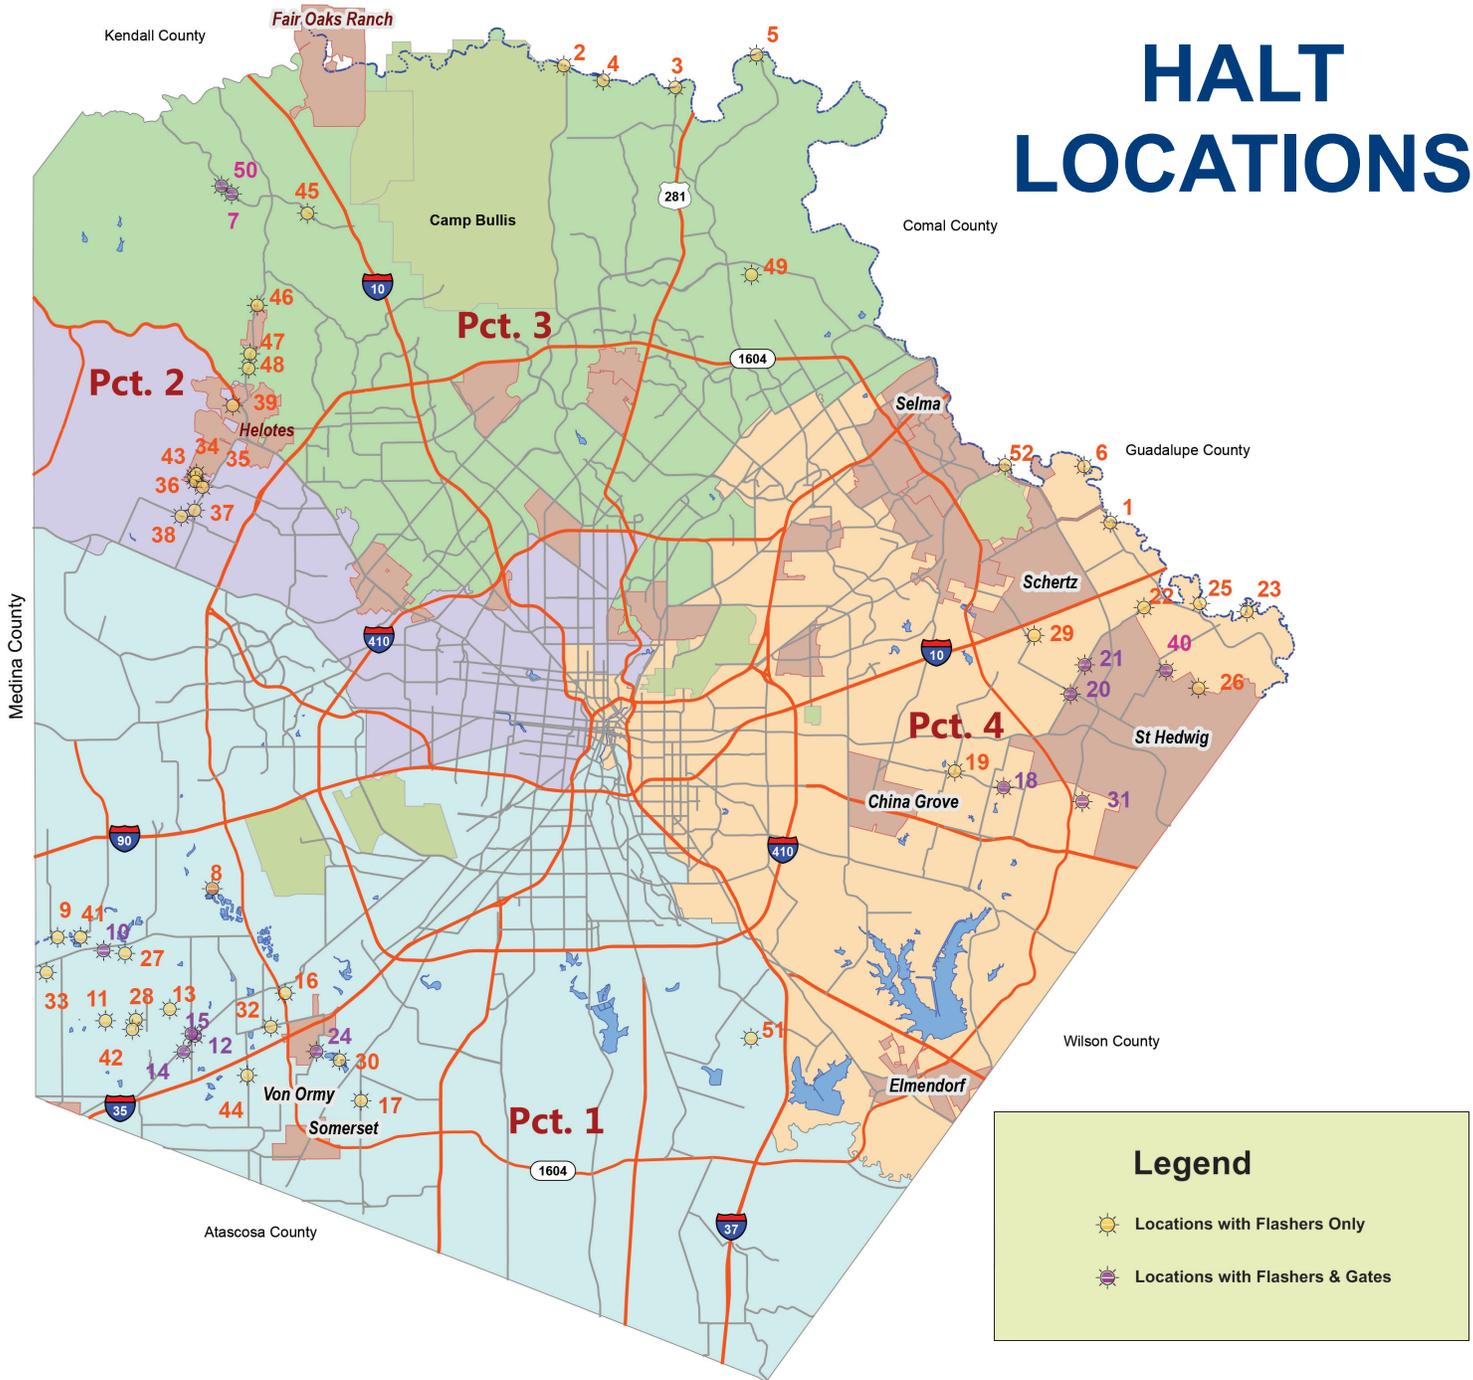

HALT uses a sensor to detect rising water and, once the water reaches a certain depth, the system will warn drivers to turn around with either flashing lights or a combination of flashing lights and gates.

HALT will send real time information to the website www.bexar.org so drivers can see which roads are safe to travel.

| 31 La Vernia Rd @ Dry Hollow Creek | 19 Zigmont @ Chupaderas Creek Tributary |

TIPS FOR DRIVING IN THE RAIN

Bexar County is prone to flash flooding. Within seconds and without warning, drivers can find themselves stranded or even swept away by flood water.

Follow these simple steps to protect yourself:

Monitor the news for weather related information. If there is a flash flood watch or warning in effect, stay off the roads.

Avoid areas that are already flooded and do not attempt to cross a flooded roadway. Turn Around Don't Drown™

Recognize flood-prone areas such as low water crossings, dips and ditches and do not attempt to cross if flooding is possible.

Be cautious when driving at night or in unfamiliar areas when it is harder to recognize flood dangers.

Remember, it only takes a few inches of water to disable your vehicle and a foot of water will float many vehicles.

Turn Around Don't Drown™
